

## U. SHORES

### Field Note U8b2. Arniston shores – Struis Point

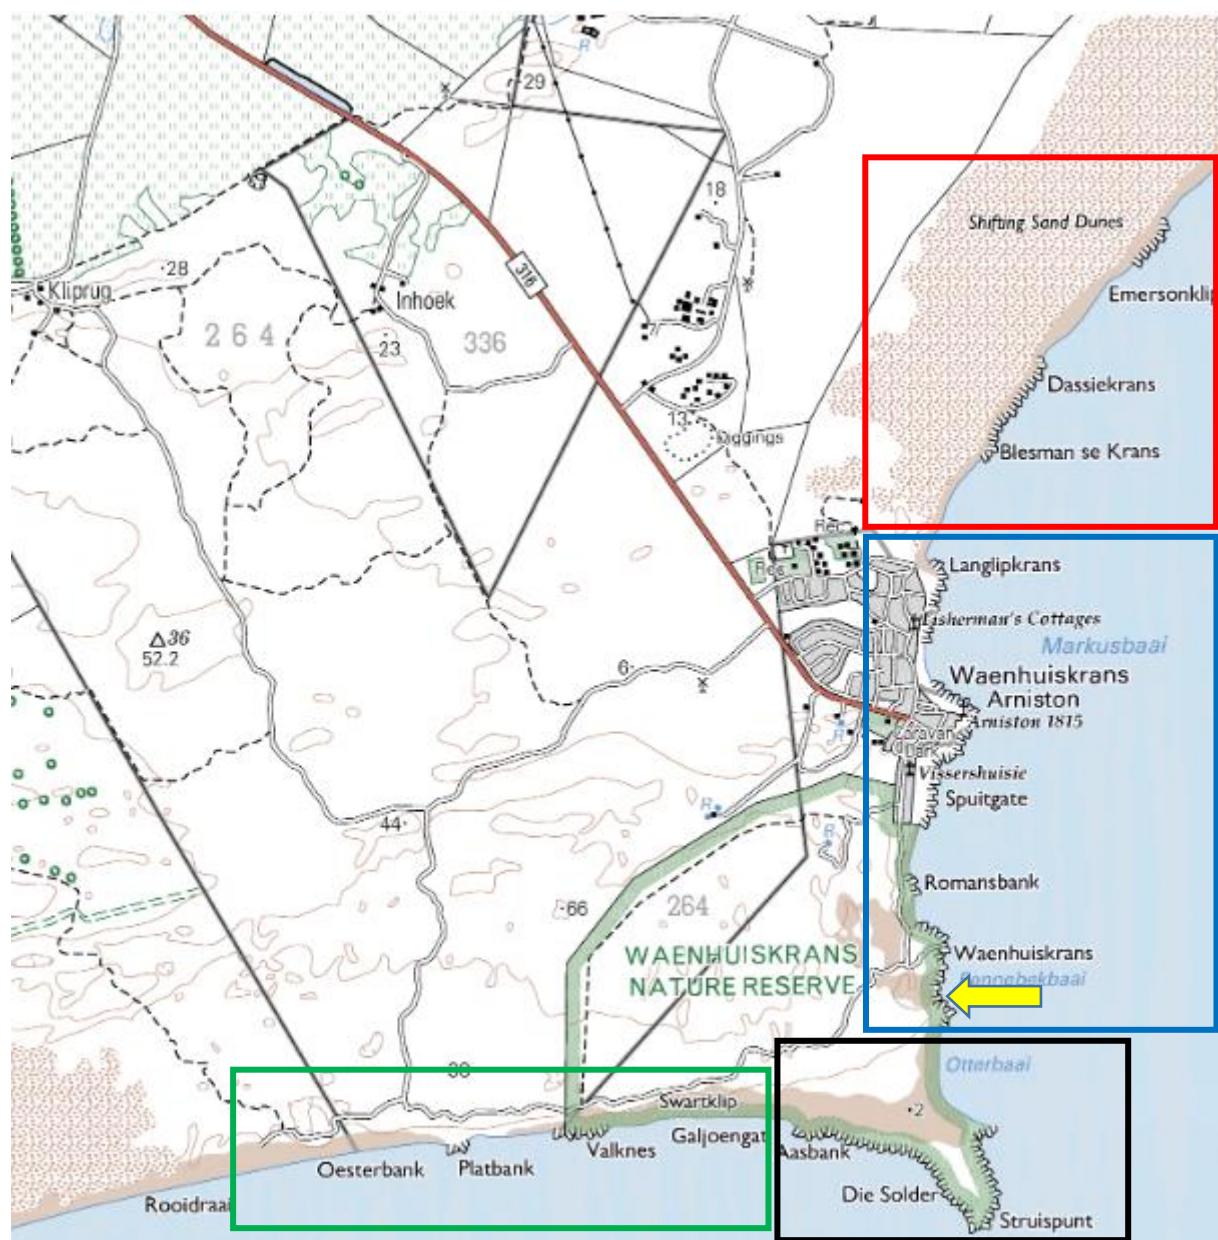

**Struis Point. View to the southeast.**

## U. SHORES

### Field Note U8b2. Arniston shores – Struis Point

There are four distinct shores around Arniston. They are, from south to north: South Shore, Struis Point, East Shore and North Shore (except for Struis Point, shore names were given by the author) (Figures 1 and 2). This Field Note is about Struis Point.

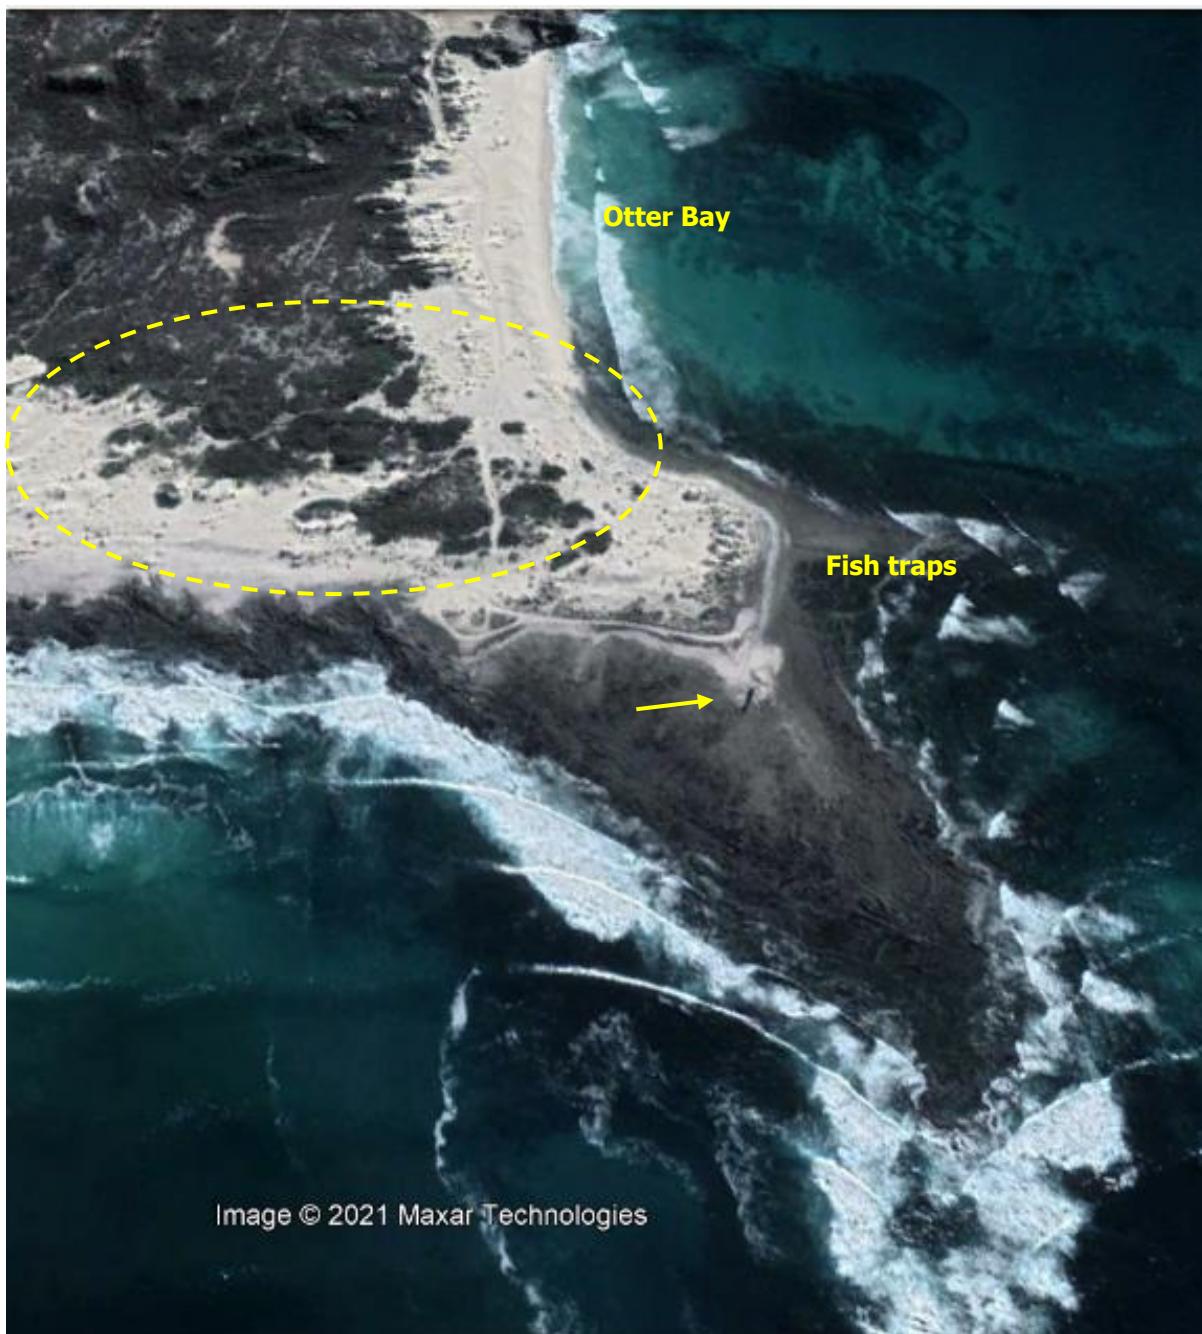

**Figure 1. Topography map of Arniston shores. Boxes: green – South Shore; black – Struis Point; blue - East Shore; red – North Shore. Yellow arrow points to the Waenhuiskrans Cave.**

**Figure 2.** Satellite image of Arniston shores. Boxes: green – South Shore; black – Struis Point; blue - East Shore; red – North Shore. Yellow arrow points to the Waenhuiskraans Cave.

Struis Point is a rocky protrusion. The rocks are of the Rietvlei Formation (Table Mountain Group) (see Chapter C) with a sandy beach to the north and a rocky strip to the west (Figure 3).

**Figure 3. Satellite image of Struis Point. Arrow points to the beacon. Ellipsoid shows the approximate confines the Rietvlei Formation boulder field.**

The sandy Otter Bay lies to the north of Struis Point (Figures 4 and 5).

**Figure 4. Otter Bay. Views from the south. Top – the sandy beach of Otter Bay. Bottom – the southern side of Otter Bay is covered with boulders of the Rietvlei Formation.**

**Figure 5. Top and bottom - the south end of Otter Bay beach.**

The rocks of Struis Point are sandstones of the Rietvlei Formation of the TMG Group (Figure 6).

**Figure 6. The rocks of Struis Point are well rounded and partly to wholly submerged at high tide.**

A cluster of fish traps is located on the east side of the point (Figure 7).

**Figure 7. Struis Point.** Top – view to the southeast; arrow points to the location of the fish traps.  
Bottom – view to the east on the fish traps. See Field Note on the fish traps in this chapter.

The Rietvlei Formation rocks extend about 1 km to the west and then disappear under the beach sand (Figure 8).

**Figure 8. The Struis Point rock strip extends approximately 1 km westwards from the beacon.**
