

D. DURICRUSTS

Field Note D2g. Calcrete as conglomerate cement

Various clasts cemented by calcrete.

D. DURICRUSTS

Field Note D2g. Calcrete as conglomerate cement

When calcrete is formed it cements whatever sediment particles and clasts, which are present at the time and at the site of its formation (Figures 1 to 8).

Figure 1. Calcrete-cemented conglomerate (on the shore of the Salt River Marsh).

Figure 2. Calcrete-cemented conglomerate (on the shore of the De Hoop Vlei).

Figure 3. Calcrete-cemented conglomerate (in a gully in the Hooge Krans Valley).

Figure 4. Chunk of calcrete-cemented conglomerate (in the Ou Werf Valley).

Figure 5. Calcrete-cemented conglomerate (in Upper Langkloof).

Figure 6. Calcrete-cemented conglomerate (in a ravine on the West Hard Dunes).

Figure 7. Calcrete-cemented conglomerate below the sand cover (in the West Renoster Valley).

Figure 8. Enlargement of a section of the conglomerate shown in Figure 7.
