

Field notes on the GEOMORPHOLOGY, HYDROLOGY and ARCHAEOLOGY Between CAPE AGULHAS and CAPE INFANTA

1. INTRODUCTION TO FEATURES IN PICTURES

This section of the website will eventually contain photographs of the features which were described and discussed in the website.

It is, in fact, an inventory of all the features that could be found within the confines of the Study Area (and to a limited extent outside it).

The photographs are arranged in sections as follows:

- a. Capes and headland
- b. Sores and dunes
- c. Rock formations0
 - 1. Sandstones and quartzites
 - 2. Shales
 - 3. Quartz veins
- d. Other formations
 - 1. Sand
 - 2. Clay
 - 3. Gravel terraces
- e. Aeolianites
- f. Karst landforms
- g. Dissolution features
- h. Duricrusts
 - 1. Calcrete
 - 2. Silcrete
 - 3. Ferricrete
- i. Erosion
- j. Tectonics
 - 1. Folding
 - 2. Faulting
- k. Rivers and gorges
- I. Lakes
- m. Archaeology
 - 1. Stone Age
 - 2. Post-colonial
